Frames for Transporting and Parts for existing Harrows

HOIST FRAME SERIES 21

Murray Series 21 Hoist Frame is the answer in transporting your Harrow set between paddocks, over roadways or to your storage facility with ease. Compatible with Category I or II three point linkage systems, it is designed to carry Series 04 Diamond, Series 05 Pastureland, Series 08 Stump Jump and Series 20 Pasture Harrows.

Utilising a sturdy frame design and effective simple connection points, the Series 21 is a reliable piece of agricultural equipment which can save time in the transportation of your Harrows. Our product design focused on creating an effective implement to enable your three point linkage to do the hard work in lifting your Harrow set for transport purposes. The Murray Hoist Frame also allows you to retain absolute control in the strength of ground engagement by either raising or dropping your Harrows slightly to achieve your desired working depth.

CULTIVATION
